E/ONE® SEWER SYSTEMS ARE MAKING BETTER COMMUNITIES ALL OVER THE WORLD

Many communities have been made possible because of ALL-TERRAIN INFRASTRUCTURE™ pressure sewer systems from E/One and hundreds more have been made safe again after failing septic systems created serious public health problems by contaminating ground and recreational water.

The E/One sewer system delivers safe, cost-effective, reliable performance and enables controlled growth, permitting communities to maintain their quality of life at a cost they can afford.

Contact us regarding a free system design analysis to see how an ALL-TERRAIN SEWER system from E/One can save you 50 percent or more on your next project.

Environmentally Sensitive
Economically Sensible™
eone.com
ALL-TERRAIN SEWER™ LOW PRESSURE SYSTEMS FROM E/ONE
are cost-effective, highly reliable central sewering systems that can be installed in any terrain – flat, wet, rocky, even on sites with dramatic elevation changes. Plus, they are much more affordable than conventional gravity sewers, which require major excavation, and much safer for communities than septic systems, which can eventually fail, polluting ground and recreational water and endangering public health.
THE LONG TERM.
INSTALLATION.
AND FOR PRICED RIGHT FOR
and replace failing septic systems at lifecycle costs.
E/One sharply reduce both front-end SEWER low pressure systems from gravity sewers. ALL-TERRAIN SEWER
Its clean look fits unobtrusively into any environment, virtually eliminating excavation.
out of sight — the only visible part is a low-profile cover that blends seamlessly into the environment but provides easy access for servicing operations.
The Extreme series indoor grinder pump station from E/One was specifically designed for installation in a basement mechanical room or in the slab foundation.
whose looks take into consideration for homeowners.
ALL-TERRAIN SEWER low-pressure systems, from E/One are virtually invisible
low pressure systems from E/One can go anywhere, taking advantage of scenic vistas and the ability to locate structures for coastal areas, below grade, or sites with high water tables.
For the developer or prospective homeowner, ALL-TERRAIN SEWER low pressure systems from E/One free you to utilize the best locations on any plot — regardless of the location of the sewer main or septic field. This means better sightlines, aesthetics, and views, as well as the possibility of utilizing "difficult" or ominous, and maximizing the density of any development.
ALL-TERRAIN SEWER low pressure systems from E/One use an unobtrusive, small-diameter 2- to 4-inch main. Installed just below the frostline, following the natural topography of the land. The small-diameter systems mean small structures — no trenches at all if directional boring is used.
Because of failing septic systems, water is not safe to drink. In addition, septic systems decrease real estate values. ALL-TERRAIN SEWER low pressure systems from E/One go anywhere, when septic systems were virtually useless, lowering water quality and quality of life while providing an inefficient, cost-effective solution to wastewater disposal and treatment.

HOW WILL IT LOOK?
Aesthetics are a major consideration for homeowners. ALL-TERRAIN SEWER low-pressure systems from E/One are virtually unobtrusive into the environment but provides easy access for servicing operations. The Extreme series indoor grinder pump station from E/One was specifically designed for installation in a basement mechanical room or in the slab foundation. Its clean look fits unobtrusively into any environment, virtually eliminating excavation.

WHEN IT COMES TO SEWER SYSTEM TECHNOLOGY, BIGGER ISN’T BETTER.
Conventional gravity sewers can use up to a 24-inch large-diameter pipe, or main, which requires major excavation and severely disrupts the landscape and any built structures above such as homes, driveways, and plantings. ALL-TERRAIN SEWER low pressure systems from E/One use an unobtrusive, small-diameter 2- to 4-inch main. Installed just below the frostline, following the natural topography of the land. The small-diameter systems mean small structures — no trenches at all if directional boring is used.

SEPTIC SYSTEMS – POTENTIAL TIME BOMBS IN OUR MIDST
While septic systems may be the main way of disposing of residential sanitary waste, they are, at best, an interim solution and come at a high cost to public health. Around the world, septic systems have degraded ground and recreational health. Around the world, septic systems have degraded ground and recreational health.

HOMEOWNERS
• Safe — protects water quality and enhances quality of life
• Reduces costs of housing — both initial and ongoing
• Visually pleasing — only evidence is a low-profile cover that is easily camouflaged
• Does not disrupt the beauty of the landscape or damage built structures
• Virtually no preventive maintenance required of homeowner
• Central sewer increases value of home

CONTRACTORS/CONSTRUCTION MANAGERS
• Installation follows center of the land — does not require major excavation
• Needs only shallow trenches — increases ease and safety of installation procedures
• Labor and material costs are much less than sewage systems because it’s the soil that cools to public health

MUNICIPALITIES/DEVELOPERS
• Protects freedom to sewer anywhere — a significant factor when developing
• Low initial costs make central sewer economically feasible
• Low initial costs make development economically feasible
• Central sewer increases value of development units
• High reliability — no preventive maintenance
• Reduced operating costs
• Protection of public health
• Permits regulatory compliance
• Closed system — not compromised by stormwater infiltration — plus zero maintenance

ENGINEERS/OPERATORS
• Proven engineering and design
• Cost-effective central sewering solution for one-stop construction
• Engineering and technical support during design, construction, installation, and operation
• Reliable performance means reduced O&M costs — up to 50% or more savings over gravity

MANAGERS
• Safe — protects water quality and enhances quality of life
• Reduces costs of housing — both initial and ongoing
• Visually pleasing — only evidence is a low-profile cover that is easily camouflaged
• Does not disrupt the beauty of the landscape or damage built structures
• Virtually no preventive maintenance required of homeowner
• Central sewer increases value of home

PERMITS
• Closed system — not compromised by stormwater infiltration — plus zero maintenance
• Will work with gravity in a hybrid system

AT A FRACTION OF THE COST OF GRAVITY SEWERS.

HOW DOES IT WORK? WHY IS IT BETTER?
With E/One, you can set your sites higher — or lower. But, you can site new homes in formerly unbuildable locations — rugged hills, isolated flatlands, coastal areas, below grade, or sites with high water tables.
from E/One are known as central sewer TERRAIN SEWER low pressure system IS BETTER THAN GRAVITY: not rely on gravity to carry the waste, vertically. Because the system does more miles, or uphill some 185 feet output is pressurized, the wastewater depending on the location. Because the system works to a treatment site or central sewer, SEWER SYSTEM WORKS: Both the gravity sewer and the ALL-TERRAIN SEWER SYSTEM WORKS.

The E/One system stores, grinds and the industry leader in ruggedness, the heart of the E/One system, is engineered to do one thing perfectly. The Extreme series grinder pump, the latest in the E/One line, is responsible for grinding and pumps a single unit. Translation: it lowers operational costs, the cost of waste collection, and reduces maintenance. The E/One grinder pump is engineered to do one thing perfectly and in the process, grades the land perfectly for homeowners, builders, developers and municipalities.

THE MOST RUGGED, LONGEST-LASTING PUMP IN THE INDUSTRY. The E/One grinder pump results in a 15 year average mean time between service calls and requires no preventive maintenance. Plus, low upfront costs, reduced operating expenses, and the ability to be installed at any site, regardless of the challenges of topography.

DEFY GRAVITY WITH E/ONE. The beauty of the ALL-TERRAIN SEWER low pressure systems from E/One is that, unlike conventional central sewers, it defies gravity. Because installation follows the natural contour of the land, it is easier to install, including grading that is flat, wet, rocky, or hilly. It goes from freedom to sewer anywhere including sites where old septic systems have contaminated water and posed severe public health issues.

NEEDLED-BETWEEN THE CASCADE AND THE OLYMPIC MOUNTAIN'S ranges, the Kitsap Peninsula boasts 300 miles of scenic coastlines in the Puget Sound. As such, high-quality treatment is threatened that pristine coast, coastal engineers found a cost-effective solution – and it only in E/One sewer systems. They compared the construction and E/One costs of four distinct sewer collection systems, and the E/One pressure sewer system came out top – in both categories. Compared to a gravity system, the E/One system was less than a quarter of the cost to install, and less than half prepayment O&M.

NEARLY 100 E/One grinder pumps and miles of high-density polyethylene pressure main were installed along the waterfront. A limited analysis of the operating and maintenance costs showed that after seven years, only 13 service calls per year were required – one-third the number projected. During this time between service calls was 20 years – more than double the project estimate of 10 years. The cost of those repairs came in at all per cent less than projected.

People lived in fear...

... of their septic tanks

...and 75% on installation."

People pay a premium for this natural setting.

E/One showed us how to preserve... and our capital.

This 2,200 site development is nestled in the rugged, hilltop north Georgia terrain. A thorough setting that offers landscape, water features, and indoor views. Plus, considering sewering challenges.

That’s why the developer turned to E/One, a trusted resource, to help him engineer an elegant, simple solution. By using pressure sewers, only shallow, contour-hugging individual diameter lines were needed to carry wastewater – up hill.

Sewering the site was an uphill battle.

With E/One I found gold in these hills

Engineers compared the construction and E/One costs of four distinct sewer collection systems, and the E/One pressure sewer system came out top – in both categories. Compared to a gravity system, the E/One system was less than a quarter of the cost to install, and less than half prepayment O&M.

Nearly 100 E/One grinder pumps and miles of high-density polyethylene pressure main were installed along the waterfront. A limited analysis of the operating and maintenance costs showed that after seven years, only 13 service calls per year were required – one-third the number projected. During this time between service calls was 20 years – more than double the project estimate of 10 years. The cost of those repairs came in at all per cent less than projected.

E/One can solve sewer problems THE LONG TERM.

Installation AND FOR PRICED RIGHT FOR a fraction of the cost of conventional lifecycle costs.

E/One sharply reduce both front-end installation costs and overall lifecycle costs.

SET YOUR SITES ANYWHERE — ALL-TERRAIN SEWER low pressure systems from E/One are virtually invisible into any environment, virtually eliminating excavation.

HOW DOES IT WORK? WHY IS IT BETTER?

PRICED RIGHT FOR INSTALLATION, AND FOR THE LONG TERM.

E/One can solve sewer problems and replace failing septic systems at a fraction of the cost of conventional sewers. ALL-TERRAIN SEWER low pressure systems from E/One sharply reduce both front-end installation costs and overall lifecycle costs.

WHEN IT COMES TO SEWER SYSTEM TECHNOLOGY, BIGGER ISN'T BETTER.

Conventional gravity sewers can use up to a 24-inch large-diameter pipe, or more, which requires major excavation and severely disrupts the landscape and any built structures such as roads, driveways, and plantings. ALL-TERRAIN SEWER low pressure systems from E/One use an unobtrusive, small-diameter 2- to 8-inch main that's installed just below the headline, following the natural topography of the land. The small-diameter screens mean weed burrows — or anything at all — are unlikely to clog or cause an outage.

SEPTIC SYSTEMS – POTENTIAL TIME BOMBS IN OUR MIDST

While septic systems may be a common way of disposing of residential sanitary waste, they are, at best, a temporary solution and come at a high cost to public health. Around the world, septic systems have degraded ground and recreational areas, failed repeatedly, and given engineers, developers, community planners, and homeowners the freedom to design and develop anywhere, taking advantage of scenic vistas and the ability to locate structures for coastal areas, below grade, or sites with high water tables.

HOW WILL IT LOOK?

Aesthetics are a major consideration for homeowners. ALL-TERRAIN SEWER low pressure systems, from E/One are virtually unobtrusive into any environment but provides easy access for servicing operations.

The Extreme series indoor grinder pump station from E/One was specifically designed for installation in a basement mechanical room or in the slab foundation. Its clean look fits unobtrusively into any environment, virtually eliminating excavation.

CONTRACTORS/CONSTRUCTION MANAGERS

Installation follows center of the land — does not require major excavation.

Needs only shallow trenches — increases ease and safety of installation procedures

Labor and material costs are much less than gravity sewer systems.

HOMOWNERS

Safe — protects water quality and enhances quality of life.

Reduces costs of holding — both initial and ongoing.

Visually pleasing — only evidence is a low-profile cover that is easily camouflaged.

Does not disrupt the beauty of the landscape or damage built structures.

Almost all maintenance required of homeowner.

Central sewer increases value of home.

CONTRACTORS/CONSTRUCTION MANAGERS

Installation follows center of the land — does not require major excavation.

Needs only shallow trenches — increases ease and safety of installation procedures

Labor and material costs are much less than gravity sewer systems.

MUNICIPALITIES/DEVELOPERS

Permits freedom to sewer anywhere in a community.

Low initial costs make central sewers economically feasible.

Low initial costs make development economically feasible.

Central sewer increases value of development units

High reliability — no preventive maintenance.

Reduces operating costs

Protection of public health.

Permits regulatory compliance.

Closed system — not compromised by stormwater infiltration — plus zero exfiltration.

MUNICIPALITIES/DEVELOPERS

Permits freedom to sewer anywhere in a community.

Low initial costs make central sewers economically feasible.

Low initial costs make development economically feasible.

Central sewer increases value of development units

E/One sewer system: 2-4” main, installed to follow the contour of the land.
TERRAIN SEWER low pressure system IS BETTER THAN GRAVITY: not rely on gravity to carry the waste, vertically. Because the system does depending on the location. Because the system does not rely on gravity to carry the waste, it provides more options for sizing and building, as well as system renovations.

WHY THE E/ONE SYSTEM IS BETTER THAN GRAVITY: Both the gravity system and the ALL-TERRAIN SEWER low pressure system from E/One are known as central sewer systems. Most cities and villages use central sewerage, which simply means that waste is transferred, usually by pipe or a main, to a central treatment plant. Gravity sewers are the "original" central sewers, with origins in the Roman aqueducts. Unfortunately, the technology behind gravity sewers was outstripped as technology improved. The E/One system stores, grinds and reduces maintenance. The Extreme series grinder pump, the heart of the E/One system, is engineered to do one thing perfectly: wastewater storage, grinding, and pumping in a single unit. Translation: it lowers operating costs, the cost of waste collection, and reduces maintenance.

THE MOST RUGGED, LONGEST-LASTING PUMP IN THE INDUSTRY. The E/One sewer grinder pump results in a 10-year average mean time between service calls and requires no preventive maintenance. Plus, low upfront costs, reduced operating expenses, and the ability to be installed at any site, regardless of the challenges of topography.

DEFY GRAVITY WITH E/ONE. The beauty of the ALL-TERRAIN SEWER low pressure systems from E/One is that, unlike conventional central sewers, it defies gravity. Because installation follows the natural contour of the land, it is closer to all terrain, including flat that is flat, wet, rocky, or hilly. It goes the freedom to sewer anywhere including sites where old septic systems have contaminated water and posed severe public health issues.

CASE STUDIES

“People lived in fear … of their septic tanks”

People pay a premium for this natural setting.

E/One showed us how to preserve it—and our capital.”

This 2,200-site development is nestled in the rugged, hilly north Georgia terrain. A drainage setting that offers an upland future, pristine forests, and breathtaking views. Plus considerable sewering challenges. That’s why the developer turned to E/One, a trusted resource, to help him engineer an elegant, simple solution. By using pre-existing municipal utilities, the solution required a fraction of the cost to install, and less than half projected O&M. The developer says it best: “The E/One system allows us to offer our future residents the environmental quality of life in a most attractive sewer community.

People pay a premium for this natural setting.

“Sewering the site was an uphill battle.”

“People lived in fear … of their septic tanks”

The pristine shoreline is a primary reason that potential homes are sought after in Jerusalem, New York, located on Keuka Lake. Nestled between the Cascade and the Olympic Mountain ranges, the Kitsap Peninsula boasts 300 miles of scenic coastlines. So when selecting a new community, the town recognized a solution was needed to improve the environment as well as the water quality. The town evaluated lift stations from E/One eliminated 12 lift stations (versus a gravity sewer system) and the E/One pressure system came in at a fraction of the cost to gravity sewers. This solution minimized the number of roughly 700-foot lift stations from 20—to just three. People pay a premium for this natural setting.
